GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Shah, Sanjay Krishnakant
APPLICANT: Shah, Sanjay Krishnakant
APPLICANT: Tang, Li
TITLE OF INVENTION: RECOMBINANT OLEANDOLIDE POLYKETIDE SYNTHASE
TITLE REFERENCE: 30062-2005-00
CURRENT APPLICATION UNDER: US/09/428,517
CURRENT FILING DATE: 1999-10-28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2 VALIAGRIRMLGDOFNGELEASAKN 26

APPLICANT: Betlach, Mary C.

APPLICANT: Betlach, Mary C.

APPLICANT: Betlach, Mary C.

APPLICANT: Mobaniel, Robert

APPLICANT: And, Li

TILE OF INVENTION: RECOMBINANT OLEANDOLIDE POLYKETIDE SYNTHASE

TILE OF INVENTION: RECOMBINANT OLEANDOLIDE POLYKETIDE SYNTHASE

FILE REPERENCE: 30062-20029.00

CURRENT APPLICATION NUMBER: US/09/428,517

CURRENT APPLICATION NUMBER: 60/120,254

EARLIER APPLICATION NUMBER: 60/120,254

EARLIER APPLICATION NUMBER: 60/106,100

EARLIER PILING DATE: 1999-10-29

NUMBER OF SEQ ID NOS: 12

SOFTWARE: PALENTIN Ver. 2.1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 5390, Application US/09134000C

Patent No. 6617156

Patent No. MATTON:

Patent No. 6617156

GENERAL INFORMATION:

APPLICANT: Lynn Doucette-Stamm et al

TITLE OF INVENTION: BUTERC ACID AND AMINO ACID SEQUENCES RELATING TO

TITLE OF INVENTION: BUTERCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: UNMERR: US/09/134,000C

CURRENT APPLICATION NUMBER: US/09/134,000C

CURRENT PILING DATE: 1998-08-13

PRIOR PILING DATE: 1997-08-15

NUMBER OF SEQ ID NOS: 6612

SOFTWARE: Patentin version 3.1

SEQ ID NO 5390

LENGTH: 351
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GENERAL INFORMATION:

Patent No. 651795

GENERAL INFORMATION:

APPLICANT: Marc J. NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERGGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPRENCE: 107796.136

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR PILING DATE: 1999-02-18

PRIOR FILING DATE: 1999-07-27

NUMBER OF SEQ ID NOS: 33142

LENGTH: 315
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 23751, Application US/09252991A

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

T02574

Mypothetical protein At2g39280 [imported] - Arabidopsis thaliana
NyAlternate names: hypothetical protein T16B24.8

C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 05-Mar-1999 #sequence_revision 05-Mar-1999 #text_change 09-Jul-2004
C;Accession: T02574; D884815
B;Rounaley, S.D.; Kaul, S.; Lin, X.; Ketchum, K.A.; Crosby, M.L.; Brandon, R.C.; Sykes, abumitted to the EMBL Data Library, August 1998
A;Description: Arabidopsis thaliana chromosome II BAC T16B24 genomic sequence.
A;Reference number: Z14679
A;Accession: T02574
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;Status: nucleic acid sequence not shown

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- FUNCTION: ATP citrate-lyaes is the primary enzyme responsible for the synthesis of cytosolic acetyl-CoA in many tissues. Has a central role in de novo lipid synthesis. In nervous tissue it may be involved in the biosynthesis of acetylcholine (By similarity).
-!- CATALYTIC ACTIVITY: ADP + phosphate + acetyl-CoA + oxaloacetate =
                                                                                                                                                                                                                                                                                                                                                 STRAIN=IES, and ISS, MEDINE=21363810; PubMed=11471062; Xu Y., Yang F., Canniff J., Enringer M.A., Thompson J., Conroy O., Xu Y., Yang F., Canniff J., Besson M., Gornon I., Bennett B., Johnson T.E., Sikela J.M.; "High-throughput sequence identification of gene coding variants within alcohol-related Offis:";

ATP-citrate synthase (EC 2.3.3.8) (ATP-citrate (pro-S-)-lyase)
(Citrate cleavage enzyme).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -!- SUBUNIT: Homotetramer (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: In the N-terminal section, belongs to the succinate/malate CoA ligase beta subunit family.
-!- SIMILARITY: In the C-terminal section, belongs to the succinate/malate CoA ligase alpha subunit family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  InterPro; IPR002020; Citrate synth. In nervous tissue it may be involved in the biosynthesis of acetylcholine. ATALYTIC ACTIVITY: ADP + phosphate + acetyl-CoA + oxaloacetate = ATP + citrate + CoA.

ENZYME REGULATION: Major regulation of ATP citrate-lyase activity altering the amount of enzyme. SUBUNIT: Homotetramer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE=90110199; PubMed=2295639;

- SUBCEDIVILAR LOCATION: Cytoplasmic.
- PTM: Phosphorylated on two regulatory serines. The ability to phosphorylate at either one of the regulatory sites depends of phosphorylation state of the other regulatory site.
- PTM: The N-terminus is blocked.
- SIMILARITY: In the N-terminal section, belongs to the succinate/malate CoA ligase beta subunit family.
- SIMILARITY: In the C-terminal section, belongs to the succinate/malate CoA ligase alpha subunit family.
                                                                                                                                                                                            COA-binding (Potential).
